

The "Hamburger Schule"

Logic

The Hamburger Schule recognises coaching as being justifiable and comprehensible in its practical form, in its understanding of coaching, in the coaching process and in the evaluation of the coaching. With this in mind, a logic in coaching is given and necessary. As logic is considered as being the teaching of formal relationships or thought materials, then observing these in the actual thought process and its explanation can be "logically" experienced.

The curriculum of a coaching training course is based on logic.
